

Q: Why stored satellites will not be found after a certain time?

A: There are four possible reasons for this:

- 1. Superstructures or something else obstruct the sight to the satellite.
- 2. You changed your geographical position so much, that the satellite data is not correct any more.
- 3. You left the coverage area of the satellite.
- 4. There were severe changes on the satellite regarding the transponder assignment.

Please refer to the manual!
